

Know whether you're coming or going.....

A flexible application software suite of enterprise wide tracking capabilities that delivers instant, accurate information for your ever-changing transport business.

Carrier Information Systems (CIS®) **Transportation Software**

Combine sky rocketing fuel prices, capacity constraints, rising interest rates, higher insurance premiums, and a lack of visibility into global logistics processes and you've got a serious challenge to the bottom line. As the world becomes flatter and the vision of one global economy draws more near, managing transportation processes has never been more critical.

CIS® application software provides a full spectrum of data processing requirements for the Truckload Common Carrier, LTL, Intermodal, Bulk, Truck Leasing & Renting, and warehousing industries. The base system was painstakingly developed and has been thoroughly field tested under real working conditions. No need to worry about investing in an experimental program. With additional hardware components, our application can be easily tailored for seamless connectivity for EDI/SFTP processing, bar coding/scanning, imaging, faxing and real-time satellite tracking of individual vehicles.

Experience the

- Improve cash flow with faster billing
- Improve accuracy in rating and billing via automated pre-determined rate tables
- Reduce fines due to inaccurate or late reporting procedures
- Reduce costly major repairs to equipment via the preventive maintenance module
- Establish standardized accounting and administrative procedures
- Utilize web based tracking for real time updates
- Increase staff efficiency by reducing errors and wasted time from repetitive manual data entry
- Operate in a "paperless reporting" environment for substantial processing cost reductions
- Automate customer pick-ups and acknowledgements via the internet
- Improves customer service with up-to-date dispatch information at your fingertips

Contact your **ASK** sales representative at (610) 617-0300 for more information on how a **CIS®** software implementation can keep your company moving in the right direction.

About ASK
