

## ASK COST SAVINGS PRODUCTS FOR SCO-UNIX / BBX SYSTEMS

### EDI Transmissions Via FTP For True Cost Savings

Customer to Vendor and Vendor to Customer communications via computer to computer data transfers have become an essential, accurate, fast, and very economical means of conducting business. To compete in today's highly electronically driven economy, businesses must utilize computer to computer data communication and transfer techniques, but should do so in a cost effective manner. Review your own business and carefully examine your current methods of transferring data between yourself and your customers and or vendors. You may discover that your current VAN and transfer methods are not as cost effective as they should be.

#### Benefits Include:

- **Reliability:** The reliability of a standard internet connection is much higher compared to a point to point dial-up modem/phone line connection typically used to transmit EDI files.
- **Realized Cost Savings:** There is an appreciable monthly cost savings in VAN charges in switching from CLEO to FTP for all EDI transmissions. Dial Up phone lines can be eliminated realizing additional savings.
- **Reduced Transfer Times:** Significant decrease in the total transmission time to send & receive EDI files.

#### About ASK

ASK Technologies, Inc. is a national provider of IT hardware, software and professional services. ASK provides our clients the ability to transform current information technology into productivity. Whether utilizing technology to bridge the gap between employees, business workflow and computers, or using technology to supply access to data regardless of connection, location and time, ASK offers the products and services required to survive in a very competitive world.
